Dear EIS conference attendees,

On the last day of EIS conference, Thursday, April 27, we were notified that several people reported testing positive for COVID-19. Since the conference ended, we have received additional reports of attendees testing positive for COVID-19.

CDC and the Georgia Department of Public Health will conduct a rapid assessment to understand the extent of SARS-CoV-2 transmission associated with travel to and attendance at the EIS conference. A survey will be sent to conference attendees, and we would appreciate your participation.

If you attended the conference in person, you may have been exposed to someone with COVID-19. If you are experiencing symptoms, we recommend you follow CDC guidance for isolation and testing. If you test positive and are high risk for a severe outcome, please see your medical provider and consider treatment, as appropriate.
