Good Morning all,

I was thinking it might be good to have a quick update call with all jurisdictions and CDC to get update on investigations and then possibly discuss jurisdiction for reporting of the cases since information hasn't been clear.

Sincerely,

**Megan Gumke, MPH, CPH**

I don't see any linkage to the OH case with the limited information available at this time. As previously reported, that individual was infectious on flights to and from FL on (b)(6) and was reportedly in the hotel room for the duration of the short trip other than a hospital visit on 1/28. Reason for the trip was not disclosed.

Hi Megan,

Thanks for the update, I'm happy you all were able to link these cases together! I have a few questions to make sure that I'm tracking everything correctly:

- Are these cases linked to the OH case who traveled to (b)(6)
  - FYI- I did reach out to OH and they said that the case mostly stayed in the hotel while in (b)(6)
  - If so, what was the date/location of the exposure?
- If known—what were the travel dates for the LA and IN families?

Thanks,  
Adria

Hey Adria,

I think we figured this out. Louisiana's cases are our cases (well ones that we were investigating and didn't have lab work on yet). Then we're guessing Indiana's case is family and everyone got together in (b)(6) Unclear residency at this time.

Sincerely,

Hi All,

We've spoken to everyone individually, so I wanted to link everyone together. Indiana and Louisiana both reported confirmed measles cases with recent travel to (b)(6), Florida. Travel dates and locations

are currently unknown, but I hope that you all may be able to work together to find links between the IN and LA families.

Please let me know if you find any connections between the cases or more details about the (b)(6) travel.

Thanks,  
Adria

Good morning!

We were able to do a second interview with our patient's family but they still weren't able to confirm dates of travel other than it occurred in (b)(6). According to their medical records though, the return date might have been around (b) since they were seen on the 2/13 and mentioned (b)(6) travel (b)(6) ago' and they reported they did not travel while the patient was sick.

Thanks!

Makayla

Hi,

At this time, the cases we have been trying to reach are lost to follow-up so we do not have exact travel information. When initially reported on 2/20, the physician noted the family visited (b)(6) (b)(6). We will let you know if we are able to get any updated information.

Thanks,  
Gillian

Good Morning all,

I was thinking it might be good to have a quick update call with all jurisdictions and CDC to get update on investigations and then possibly discuss jurisdiction for reporting of the cases since information hasn't been clear.

Sincerely,

**Megan Gumke, MPH, CPH**

I don't see any linkage to the OH case with the limited information available at this time. As previously reported, that individual was infectious on flights to and from FL on (b)(6) and was reportedly in the hotel room for the duration of the short trip other than a hospital visit on 1/28. Reason for the trip was not disclosed.

Hi Megan,

Thanks for the update, I'm happy you all were able to link these cases together! I have a few questions to make sure that I'm tracking everything correctly:

- Are these cases linked to the OH case who traveled to (b)(6)
  - FYI- I did reach out to OH and they said that the case mostly stayed in the hotel while in (b)(6)
  - If so, what was the date/location of the exposure?
- If known—what were the travel dates for the LA and IN families?

Thanks,  
Adria

Hey Adria,

I think we figured this out. Louisiana's cases are our cases (well ones that we were investigating and didn't have lab work on yet). Then we're guessing Indiana's case is family and everyone got together in (b)(6) Unclear residency at this time.

Sincerely,

Hi All,

We've spoken to everyone individually, so I wanted to link everyone together. Indiana and Louisiana both reported confirmed measles cases with recent travel to (b)(6) Florida. Travel dates and locations are currently unknown, but I hope that you all may be able to work together to find links between the IN and LA families.

Please let me know if you find any connections between the cases or more details about the (b)(6) travel.

Thanks,  
Adria

Hi Marshall,

OP and TS are the same. Nasopharyngeal swabs are different. That's what I've always worked with, anyway. So you are correct but your language and your epis' language differ. Which is a distinction without a difference.

Please let me know if you have more questions.

Best,

Bettina

Hello Measles experts!

I am reaching out to you for a clarification of something I really should probably know at this point! We follow your measles PCR assay, and Oropharyngeal (OP)swab is listed as an acceptable specimen type. I am under the impression an Oropharyngeal swab and a Throat swab are the same thing, with OP being the medical term for a throat swab. Some simple googling seems to support this. We want to make sure we get our messaging right, because we have epidemiologists who are suggesting throat swab collections, which does not perfectly match, as written, our assay.

Thank you very much!  
Marshall

**Subject:** Two confirmed measles cases in FL

Good afternoon Adria,

This week FDOH was made aware of suspect measles cases in (b)(6) Florida and (b)(6) County. To date, two measles cases have been confirmed with test results pending for additional suspect cases.

**(b)(6) Florida Measles Case Summary**

FDOH (b)(6) was notified of a suspect measles case in a 21-year-old unvaccinated man admitted 02/12/2024 to a local hospital and reported seropositive for measles on 02/15/2024. He reportedly entered the United States with his family on (b)(6) following travel from (b)(6). A previous healthcare encounter was identified for a hospital in (b)(6) County on (b)(6). FDOH (b)(6) is leading the investigation and coordinating with (b)(6) Counties on contact investigations involving healthcare facilities in those jurisdictions.

(b)(6)

**(b)(6) County Summary**

FDOH (b)(6) was notified on 02/14/2024 by a local hospital of a suspect measles case in an unvaccinated 9-year-old female with no known travel or other risk factors. She was unvaccinated due to religious exemption and currently resides in (b)(6) County. Symptom onset was on 2/9/2024 with onset of maculopapular rash on 02/13/2024. Specimens were collected on 02/14/2024; BPHL reported PCR-positive measles results on 02/15/2024. Four household contacts were identified and are reportedly immune to measles. Contact investigation has been initiated for exposed healthcare staff and patients. The patient is a (b)(6) student at a local elementary school with her last day of attendance on (b)(6). Three additional suspect measles cases have been identified in unvaccinated students attending the same elementary school and are currently under investigation. Specimens were collected 02/16/2024 for these three cases and results are pending at BPHL. FDOH (b)(6) is working with the school to identify additional cases of rash illness and implementing control and prevention measures.

Please let us know if you have any questions or would like any updates over the weekend.

Sincerely,

Ann Schmitz, DVM, AM

Good morning,

See attached case reporting excel sheet mentioned in the call yesterday. We've already included the 1 import and the 4 outbreak related cases based on the information provided over the weekend. Please review the information on the existing cases and add the additional cases here. We can use this for reporting moving forward.

Quick question, when are you expecting to receive the lab results from the 5 suspected cases mentioned yesterday?

Thanks,  
Kelley

Hi Ann,

Alternatively, would 12:00 – 12:30 or 4 – 5 work for today? If not, I can look at calendars for tomorrow.

Thanks,  
Kelley

**Subject:** Two confirmed measles cases in FL

Good afternoon Adria,

This week FDOH was made aware of suspect measles cases in (b)(6) Florida and (b)(6) County. To date, two measles cases have been confirmed with test results pending for additional suspect cases.

**(b)(6) Florida Measles Case Summary**

FDOH- (b)(6) was notified of a suspect measles case in a 21-year-old unvaccinated man admitted 02/12/2024 to a local hospital and reported seropositive for measles on 02/15/2024. He reportedly entered the United States with his family on (b)(6) following travel from (b)(6). A previous healthcare encounter was identified for a hospital in (b)(6) 2/06/2024. FDOH- (b)(6) is leading the investigation and coordinating with (b)(6) Counties on contact investigations involving healthcare facilities in those jurisdictions.

(b)(6)

**(b)(6) County Summary**

FDOH- (b)(6) was notified on 02/14/2024 by a local hospital of a suspect measles case in an unvaccinated 9-year-old female with no known travel or other risk factors. She was unvaccinated due to religious exemption and currently resides in (b)(6). Symptom onset was on 2/9/2024 with onset of maculopapular rash on 02/13/2024. Specimens were collected on 02/14/2024; BPHL reported PCR-positive measles results on 02/15/2024. Four household contacts were identified and are reportedly immune to measles. Contact investigation has been initiated for exposed healthcare staff and patients. The patient is a (b)(6) student at a local elementary school with her last day of attendance on (b)(6). Three additional suspect measles cases have been identified in unvaccinated students attending the same elementary school and are currently under investigation. Specimens were collected 02/16/2024 for these three cases and results are pending at BPHL. FDOH- (b)(6) is working with the school to identify additional cases of rash illness and implementing control and prevention measures.

Please let us know if you have any questions or would like any updates over the weekend.

Sincerely,

Ann Schmitz, DVM, AM
